

To reduce the risk of slipping accidents in winter and to spare the environment from salt, or where it is prohibited to salt the roads, Rådasand has developed an ice grit for de-icing.

The ice grit is suitable to be used at caretaking such as de-icing of roads, sidewalks, walkways, parking lots or other public places where you want to avoid slipping.

The size of the grit makes it easy to sweep up and to be recycled, which minimizes the environmental impacts and the resource utilization.

The grit is delivered washed and dried, without over- and under grains.

The ice grit can be delivered in 25 kgs plastic bags, big bags of approximately 1.1 tonnes/each or in bulk delivered by tipper or bulk-bodied truck which blows the grit into your silo.

Rådasanden in natural size in dry (top) and wet (middle) condition. Colour reproduction may vary due to printing process used.

Product specification sheet: Ice grit coarse grained rev 1.0.
Contains basic technical data. Rådasand AB reserves the right to change specifications without giving prior notice.

Please contact us if you want further information of the sand from Rådasand, get references or ask for a sample delivery.
