

To remedy slippery roads and to reduce the risk of slipping accidents in winter, or where it is prohibited to salt the roads, Rådasand has developed an eco-friendly ice-grit.

The ice grit is recommended to be used as de-icing of driveways, sidewalks, access roads or entrances.

Rådasands ice grit fine-grained is thanks to its high quality also approved to be used in de-icing of airports where high demands are set on the ice grit.

The grit is delivered washed and dried, without over- and under grains.

The ice grit can be delivered in 25 kgs plastic bags, big bags of approximately 1.1 tonnes/each or in bulk delivered by tipper or bulk-bodied truck which blows the grit into your silo.

Rådasanden in natural size in dry (top) and wet (middle) condition. Colour reproduction may vary due to printing process used.

*Product specification sheet: Ice grit fine-grained rev 1.0.  
Contains basic technical data. Rådasand AB reserves the right to change specifications without giving prior notice.*

Please contact us if you want further information of the sand from Rådasand, get references or ask for a sample delivery.
